

ICT-3 My Favorite Noun Webpage Project - Version 2

Directions:

Now that you have completed your first version of the My Favorite Noun webpage, it is time to use some more advanced coding skills. You will introduce CSS and JavaScript code to your page to make it look better and function better.

Background:

Think of a webpage as a person. HTML, CSS, and JavaScript bring that person to life.

- **HTML**: This is the skeleton. It provides the basic structure and layout. HTML mostly focuses on the **content** of the webpage such as paragraphs, text, and hyperlinks.
- **CSS**: This acts like the skin and hair color. CSS mostly focuses on the **appearance** of the webpage such as background and text color, underlined or bold text, and font types.
- **JavaScript**: This acts like the muscles and organs. JavaScript focuses on the **functions** of the webpage like pop-ups, playing sounds, or counting webpage hits.

Content Rubric

- HTML contains all elements from Version 1 of the My Favorite Noun Project [5 Pts.]
- HTML to place images inside **<div>** elements. [1 Pt.]
- HTML follows the **inverted pyramid** method of layout. [5 Pts.]
